600 knots
per hour**

Flex-Tab™ Attaching System

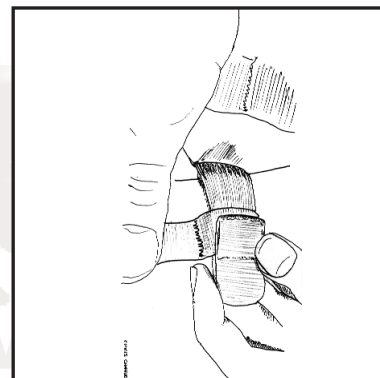

S.O.TECH developed the Flex-Tab™ (Patent Pending) to provide elements of the Army Special Operations Forces with a stronger & more reliable alternative to the MOLLE snap. By relying on folded & reinforced cloth webbing as the anchor point, S.O.TECH has replaced metal and plastic fasteners that can break or deform. The U.S. Military Aviation community tested & accepted the Flex-Tab™ in tests of load carriage equipment simulating jet aircraft ejection seat deployment conditions which included 600 knot per hour wind blasts. The Flex-Tab™ system is fully compatible with the PALS webbing located on military packs, cases & vests. Accepted by Army Special Operations, the Flex-Tab™ is in full use in combat theatres.

Simply feed the free end of the Flex-Tab™ strap through the PALS web straps forming a weave. Pass the tail end through the bottom channel & allow the folded Flex-Tab™ to hook the bottom PALS web strap forming the anchor.

Weave Flex-Tab™ through
PALS web

Pull & hook to anchor
